Chapter 11 - Introduction to Genetics

What happens during segregation?

When each F1 plant flowers and produces a gametes, the two alleles segregate from each other so that each gamete carries only a single copy of each gene.

Genetics - Mr. Reese Science

Explain what that ratio means. It means that the probability of an offspring that exhibits both dominant traits (green pod and smooth pod shape) is $9/16$. The probability of one dominant and one recessive trait (either green pod color and constricted shape OR yellow pod and smooth shape) is $3/16$.
